

Hello, my name is Julija Igorsdóttir and I graduated with Bachelor of Science degree in Chemical Engineering from University of Iceland. Professor, Christiaan Petrus Richter, who I used to work with during my bachelor degree has Ph. in Chemical Engineering.

Theme of our project work was closely related to Process Design of Chemical Reactors and Reaction. More precisely we designed the whole process of the industrial production of styrene from ethylbenzene.

Theme of my current project is „Fabrication of composite nanomaterials with components of different functionality for wastewater treatment: experimental and computational approaches.”
